**Monday September 5th** there will be no delivery service on Labour Day. Vet will be available for emergencies. Clinics will be open only in the morning for pick ups and early residue tests.

### **Welcome Dr. Winsor to Linwood Veterinary Services!**

Meghan Winsor grew up in Newfoundland, Canada. Like most veterinarians her love of animals started at a young age but the road to becoming a vet was not so straight forward. After completing a bachelor's degree in Animal Science, with a minor in agricultural business at Dalhousie University, Nova Scotia, Meghan took a year off to work at a financial agricultural lending agency. Realizing that a desk job wasn't the perfect fit she decided it was time to pursue veterinary medicine. She applied to schools abroad and completed her Bachelor of Veterinary Medicine and Surgery (BVMS) at the University of Glasgow in Bonnie Scotland and graduated in 2021. As a new graduate Meghan has spent the last year in mixed animal practice in Maryland, USA dealing mostly with dogs, cats, small ruminants and pet pigs. She comes to Linwood Veterinary Services to fulfill her passion of a career in farm animal medicine and to be a part of the Canadian agriculture industry. Her keen interest is calf health, welfare and management. Meghan is very excited to put her skills to work and build relationships with you and your farm!

Outside of work Meghan enjoys spending time with her husband Callum and their two dogs, Ronnie and Elaine. On her weekends off you will likely find her doing her favorite thing-exploring all the beautiful farmers markets.

## **RECALL NOTICE:**

### **Calcium Borogluconate 23% 500 ml from Vetoquinol**

Recall details: A type 1 recall, defined as a situation in which there is a reasonable probability that the use of or exposure to, a product will cause serious adverse health consequences or death, is being conducted on Calcium Borogluconate 23% lot B2008041. This is due to the presence of sub-visible particulates above specification values detected in some units. As the particulates are sub-visible, they cannot be detected visually. This product was manufactured in August of 2020.

The presence of particulates administered through IV infusion may lead to undetermined complications. **No adverse drug reactions have been reported for this product** however the particulate levels do not comply with the established specifications for veterinary drug products administered intravenously.

Please check any **Vetoquinol brand Calcium Borogluconate 23% 500 ml** that you have on hand for **Lot B2008041** with an **expiry of August 2023**.

The clinic purchases show we received product from this lot from June 2021 through Oct 2021 and subsequently sold to farms.

The clinic can pick up and replace this product from your farm, on behalf of Vetoquinol, just let us know if you have some and how much you have.
